

**PEAK Infrastructure** has aligned with Pollinate to develop a community program that brings life-changing products to people living in economic and energy poverty in India's city slums. PEAK has partnered to fund Pollinate in the city of Hyderabad, to support and grow the Pollinate team and increase the programs presence.

### PEAK Support

The support that PEAK has provided has resulted in significant progress within Hyderabad. This includes an increase in recruitment and training activities and strong sales results.

The Hyderabad Pollinator team getting together for a monthly stock check. Three of the female pollinators are part of the Peak program.

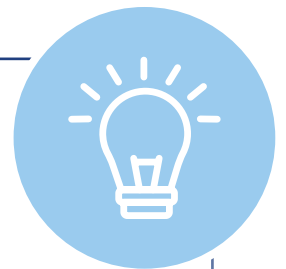

Faheemunnisa is one of the top female Pollinators from Hyderabad who has benefited from the PEAK program training and development opportunities.

### What we will achieve together

PEAK and Pollinate's goal is to assist families in poverty by providing them with long-lasting solutions and products that are all aimed at improving health, safety and quality of life. Products such as solar lights, clean cook stoves and medicated mosquito nets are distributed throughout the community by Pollinators.

Pollinators form an integral part of the Pollinate operating model. Pollinators deliver and sell products as local door-to-door sales agents, women-owned retail shops and franchisees.

PEAK's partnership with Pollinate has allowed for greater recruitment and training of Pollinators, providing them with access to income and formal employment, as well as family and personal benefits.

For each solar light sold families will save money and prevent black carbon emissions by limiting kerosene at home. Children will be able to study for longer and families will feel safer and more connected in their home. Other products distributed include solar powered fans which provide greater comfort and productivity to families.
